WHY VENTURELOOP?

We Know Your Industry

VentureLoop creates products specific to the venture capital industry. This is not a generic application. Our products were designed with your needs in mind, and they require little to no administration for you. Think of it as "Zero Administration" for your venture capital firm.

Hosted SaaS Product in the Cloud

You will not need to purchase any software or expensive server equipment, and you will not need to pull the valuable resources of an internal IT department. You can avoid the hidden costs that most products carry and securely access your data from any computer with an Internet connection and standard browser.

Security

VentureLoop uses encryption, secured servers, and firewall technology located in top-rated cloud environment.

Painless Launch Process

Unlike most software products, VentureLoop's SaaS products are quick and painless for you to launch. You will only need to provide basic information about who will need an account set up in the system and give feedback on the look and feel of the hosted site as we build it for you. We even provide you with wording for the emails you can use when you're ready to allow your portfolio companies to access the site.

Reasonable Pricing

We know your firm is sensitive to costs coming out of fixed management fees. That's why our products have a low setup cost and a low monthly hosting fee. You can even cancel at any time with a 30-day notice and without any hidden cancellation fees.

Product Highlight

VentureCareers

- Hosted career site for venture capital firms and their portfolio companies
- Collaborative technology allows portfolio companies to add, edit and delete their own job openings on a VC's career page, eliminating administration for the VC
- Resumes are stored and can be searched in a private resume database
- VentureLoop account managers update job postings to keep your website fresh when PCs don't have the resources to update on their own
